

know many different countries, regions, flying sites and more but mainly many people, all sharing this passion and fascination for flying. The success encouraged me to always give my best. Obviously there were many failures as well, but these did not demoralize me, but they encouraged me to make an effort to do better next time.

The aeromodelling sport led to my field of study Environmental Sciences in Freiburg, Germany, where I have been for more than one year, studying interesting topics, not only for my future job, but also for my passion, flying model planes. For subsidiary subjects I have chosen climatology and meteorology. For my aeromodelling experiences weather, thermal lifts in the atmosphere, environment or geography play an essential role. Although studying takes much more time than school I am as much active in aeromodelling as the years before, this year for example in Slovakia, Italy and Germany. Today I am looking forward to gain new knowledge through my studies and my future job while enjoying aeromodelling at the same time establishing national and international contacts as a senior.

All these journeys would not have been possible without the support of my parents, brother and many more people to whom I would like to express my deep gratitude.
